

KHUSHBOO

AI / Applied & Forward-Deployed Engineer

Delhi NCR, India · khushboob1694@gmail.com · 9310557822 · in/khushboo-b-b20115423 · github.com/Khushboo94code

SUMMARY

Self-taught engineer who builds and ships agentic AI end to end. I recently built **Lenny**, a full-stack agentic AI assistant (RAG, tool/function calling, multi-provider and local LLMs), and **Boxpacker**, a live optimisation app. Strong Python and backend foundation (Django/DRF, FastAPI, PostgreSQL, Celery/Redis, Docker). I like turning ambiguous, real-world problems into reliable, deployed AI products and working directly with the people who use them. High-agency, fast learner, immediate joiner.

SKILLS

- **AI / GenAI:** LLM apps (OpenAI, Gemini, Claude), RAG, embeddings & semantic search (pgvector), AI agents, tool / function calling, prompt engineering, LiteLLM, LangGraph-style orchestration, LLM evaluation, Ollama (local LLMs)
- **Languages:** Python (Advanced), SQL (Expert)
- **Backend & APIs:** FastAPI, Django, Django REST Framework, REST APIs, third-party integrations
- **Data & Infra:** PostgreSQL + pgvector, Redis, Celery, BigQuery, Docker, AWS, Git, CI/CD
- **Core CS:** Data Structures & Algorithms, System Design (HLD/LLD)

PROJECTS

Lenny — Full-Stack Agentic AI Assistant

2026

- **Tech Stack:** Python, FastAPI, React, Claude Agent SDK, LiteLLM, pgvector (PostgreSQL), OpenAI / Gemini / Claude, Ollama (Llama 3.1), Docker
- Built an **agentic loop with tool / function calling** (Claude Agent SDK) so the assistant takes actions, not just answers, with a LiteLLM fallback for reliability.
- Implemented **RAG over pgvector** with grounded, cited answers over a knowledge base.
- Ran **cloud and fully-local LLMs** (OpenAI, Gemini, Claude, and Llama 3.1 via Ollama), swappable via one config.
- Added custom command skills and output guardrails (sanitised HTML, sandboxed iframe + CSP); Dockerized end to end.
- Code: github.com/Khushboo94code/lenny-growth-assistant · Demo: youtu.be/SrJ6qE4g2kE

Q-Commerce Price Intelligence Dashboard (data + automation)

June 2026

- **Tech Stack:** Python, Django REST Framework, Scrapy, Celery, Redis, PostgreSQL
- Built Scrapy crawlers + Celery/Redis scheduling to continuously collect competitor pricing at scale, with throttling, retries and error handling.
- Exposed REST APIs powering price comparison, filtering and historical pricing insights on a live dashboard.

Multi-Vendor Digital Marketplace (full-stack + payments)

2026

- **Tech Stack:** Django, DRF, PostgreSQL, Redis, Celery, Stripe Connect, AWS S3, Docker, Unicorn, Nginx
- Built and deployed a role-based marketplace with secure Stripe Connect payments, S3 pre-signed downloads, and full vendor/customer/admin workflows.

EDUCATION

Bachelor of Engineering — Electrical Engineering

2013–17

YMCA University of Science and Technology

CERTIFICATIONS

- **Django Masterclass by AP** · Udemy · 2026
- **Ultimate AWS Certified Solutions Architect Professional 2026** · Udemy · 2026
